- 2 homes sampled by the city had manganese concentrations in the right-of-way above the RML of 5,500 mg/kg. EPA reached out to both property owners and has heard back from one who does not want to be sampled. EPA will try again with the other property owner.
- Removal start for 5 manganese homes is scheduled for mid-July. While cleanup is ongoing, will likely agree to sample additional homes if asked.
- Fact sheet was sent out in late March regarding removal action. Additional outreach is under discussion.
- Preparing memo to pre-remedial and state notifying them of elevated lead levels in residential yards.
